

WHAT IS HEP DELTA

Knowing what questions to ask your doctor can make a difference.

Hep delta harms the liver. Only people who get hep B can get hep delta. That's one reason why it's important to talk with your doctor about your risk.

It's okay, and even encouraged, to ask your doctor questions that will help you understand more about hep delta and any possible risks of infection. Speaking with your doctor is a great step towards learning about your health.

Here are some questions to help you have a conversation with your doctor:

? **What's the difference between hep B and hep delta?**

? **Can I give hep delta to my loved ones?**

? **How does someone get hep delta?**

? **What does hep delta do to the body?**

? **Should I be tested for hep delta? If so, how does testing work?**

? **What are some ways to manage hep delta and my overall health?**

These questions are a great way to start the conversation with your doctor at your next appointment. And don't be afraid to bring up any additional questions you may have about hep delta.
